

**AMENDMENTS TO THE SPECIFICATION**

The following is a marked up version of each replacement paragraph and/or section of the specification in which underlines indicates insertions and strikethrough indicates deletions.

Please replace the second full paragraph on page 8 with the following paragraph:

A<sup>1</sup>  
An embodiment of the liaison interface 122 according to the invention has been written using the Tool Command Language (TCL). The liaison interface 122 can be a stand-alone processor device running an application and one or more daemons on hardware comparable to that of the components of the client 106 (to be discussed below). Such software can be downloaded, and in doing so the computer-readable medium in which the software is embodied takes the form of a propagated signal. Alternatively, a server included in the processing circuitry 108 can generate the liaison interface 122 (e.g., represented by the application and the one or more daemons), as depicted via the dashed line 139 ~~140~~.
